Part I Preface

Thank you for using the China Import Food Enterprise Registration Management System. To help you become proficient in using this system as quickly as possible, we have prepared this user manual.

In this manual, you will find guidance on basic operations, how to use the software and hardware, and safety precautions. Please be sure to read this manual carefully before using the system for the first time; this will help you navigate the system more smoothly. This manual is intended for users with basic computer operating knowledge. We assume you are familiar with the Windows 10 (and above) operating system, are proficient in using a mouse, and have experience using browsers such as Google Chrome and 360.

This system was developed in accordance with the “Administrative Provisions of the Customs of the People's Republic of China on Registration of Overseas Manufacturers for Export of Food to China” (Promulgated under Decree No. 280 of the General Administration of Customs of the People’s Republic of China, hereinafter referred to as the “Registration Provisions”). The content of this manual is limited to instructions on system functions and cannot be regarded as an interpretation of policy. In the event of any inconsistency between the operational instructions in this manual and the actual requirements of the system, please refer to the current prompts or notifications within the system. In addition, all data listed in this manual is sample test data and is provided for demonstration purposes only.

Part II User Guidelines

2.1 Portal Website

The system is browser-based and can be found at <https://cifer.singlewindow.cn>

2.2 System Requirements

2.2.1 Operating System

Windows 10 and above (either 32-bit or 64-bit operating systems are supported).

Windows XP is not recommended.

2.2.2 Browser

Chrome 50 and above.

Part III System Overview

3.1 Target Users

The Competent Authority of the country(region) of origin (hereinafter referred to as the “Competent Authority”): Refers to the official agency in the country (region) where the overseas food manufacturer is located that is responsible for the safety and supervision of food production manufacturers within that jurisdiction. Through this system, the competent authority may review and inspect applications submitted by manufacturers under its effective supervision and recommend those that meet the requirements for registration to the General Administration of Customs of the People’s Republic of China (hereinafter referred to as “GACC”).

Overseas manufacturers for export of food to China (hereinafter referred to as “manufacturers”): Refers to the overseas manufacturers engaged in production, processing and storage of foods for export to China (The above-mentioned overseas manufacturers do not include those engaged in the production, processing or storage of food additives or food-related products), where the scope of storage facilities includes cold storage facilities used for the storage of food of terrestrial animal origin and aquatic products. Overseas manufacturers may use this system to submit registration applications and rectification materials, and to receive notifications from the GACC, among other functions.

3.2 Function Overview

The China Import Food Enterprise Registration Management System facilitates the management of registration matters for overseas manufacturers of imported food. The system's core functions include submitting and inquiring about registration applications from overseas manufacturers, as well as enabling competent authorities to review and inspect applications, and to supervise and manage registered manufacturers.

3.3 System Homepage

Enter <https://cifer.singlewindow.cn> in the address bar of your browser to access the homepage of the China Import Food Enterprise Registration Management System (hereinafter referred to as the “CIFER”).

The homepage is divided into two main sections: the information inquiry area on the left and the system login area on the right. The information inquiry area can be accessed without login and provides information on policies and the necessary preparations for submitting applications. The system login area allows users to create new accounts and log in to the system. A Chinese-English language toggle is available in the top-right corner of the page to accommodate different language needs.

Figure: System Homepage

The area on the left includes the following functions:

1. Guidance & Regulation: Provides official procedures and regulatory requirements issued by the GACC regarding the registration of overseas manufacturers of imported food.

2. Registration information of overseas manufacturers of imported food: Provides a search function for the complete list of overseas manufacturers registered in China. Users can use this function to look up information on overseas manufacturers that have been registered and authorized to export food to China.

3. Food products and the categories: Provides fuzzy search by Product codes, HS code, CIQ code, and Product name to quickly determine whether an exported food product falls under the scope of registration for the Chinese market and whether registration of the overseas manufacturer is required.

4. Notices and Announcements: Publishes official policies, system notices, and other information related to the registration of overseas manufacturers of imported food. Users can stay informed by reviewing these announcements to learn about policy changes and system updates.

5. User Manual: Provides a user manual for this system, which is intended for use by overseas manufacturers. Users can view it online or download it to their local devices.

The area on the right includes the following functions:

6. Create Account: This is for overseas manufacturers who are applying for registration for the first time to create an account for the system. After the system upgrades, all manufacturers and competent authorities that already have accounts can continue to log in using their current usernames and passwords; a new account is not required.

7. LOG-In: Overseas manufacturer users may log in to the system using their

username and password to perform various operations related to the registration of overseas food manufacturers, such as registration, modification, renewal, cancellation, and checking processing status. Please keep your login username and password secure.

3.4 Logging In and Out of the System

Click the **[LOG-In]** button on the homepage to open the login page. On this page, fill in the username, password, and the CAPTCHA in the fields provided. Once verification is passed, you will be logged in to the system.

If you do not have an account, please create an overseas account first (see Section 4.1).

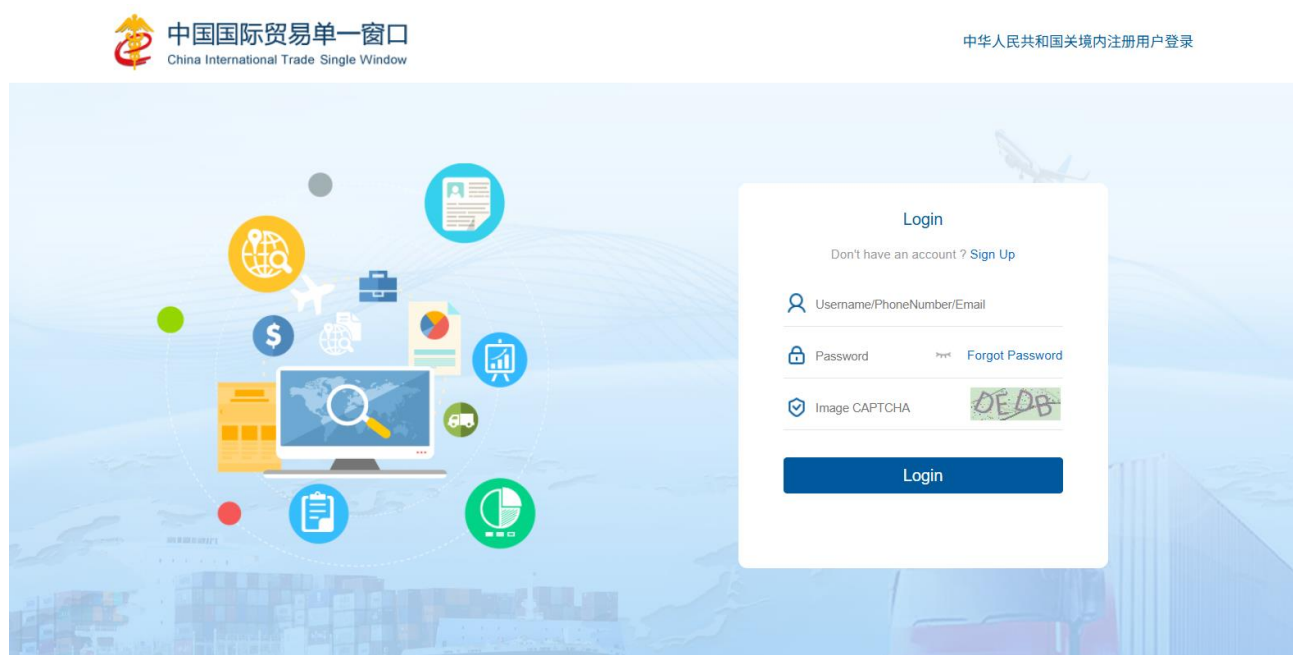

Figure: System Login

This system allows overseas manufacturers and overseas competent authorities to log in using their username and password. After logging in, you can click [Log out] in the upper-right corner of the page to exit securely.

Part IV Account Management

Overseas manufacturers access the system using a username and password.

If this is your first time accessing the system, you will need to create an overseas manufacturer account. If you already have an account, please skip this section. Only one overseas account is required for each overseas manufacturer. Once created, the

account remains valid indefinitely. This account serves as the manufacturer's unique identifier within the system, and all business operations, including new registrations, modifications, renewals, and cancellations are processed through this account.

Overseas manufacturers can use their existing accounts to apply for registration in multiple food categories as needed, without having to create duplicate accounts.

4.1 Creation of Accounts

Manufacturer users may obtain an account via the following two methods:

Method 1: Competent authorities create an account for the manufacturer

Overseas manufacturers should contact the competent authority of the country (region) of origin to have an account created for them through the system.

Method 2: Account created by manufacturers

Go to <https://cifer.singlewindow.cn>, click the “Create Account”, and complete the required information as prompted.

Figure: Account Registration of Overseas Manufacturers

Fill in the account information one by one, including: username, password, company name, etc. Fields marked with * are required. Once you have completed the form, click the **[Send email verification code]** button. The system will send an email to the provided email address. Please enter the verification code from the email, then click the **[Register Now]** button to complete the account creation.

Once an overseas account has been successfully created, the Username and Country/Region cannot be changed. Please carefully review all information before submitting it. Your email address is essential for resetting your login password; please

make sure the email you provide remains available permanently.

4.2 Complete Supplementary Account Information

For accounts created by the overseas manufacturer, upon first logging into the system, you must enter the “Registration Number for Food Production Approved by the Food Safety Competent Authority of Your Country (Region)”. This number serves as the company’s identification in its country (region) and may be a business license number, production permit number, tax ID, or similar. It must match the information on the manufacturer’s identity documents. Once entered, this number will be permanently linked to the company’s account and will be automatically populated in future registration applications. It cannot be modified once submitted, so please be sure to double-check it before submitting.

To complete this step, after an overseas manufacturer logs into the system, a prompt will automatically appear asking the manufacturer to enter the “Registration Number for Food Production Approved by the Food Safety Competent Authority of Your Country (Region)”. After entering the information, click the **[Submit]** button to save it.

4.3. Reset the account password

1. Click **[Forgot Password]** at the login page.

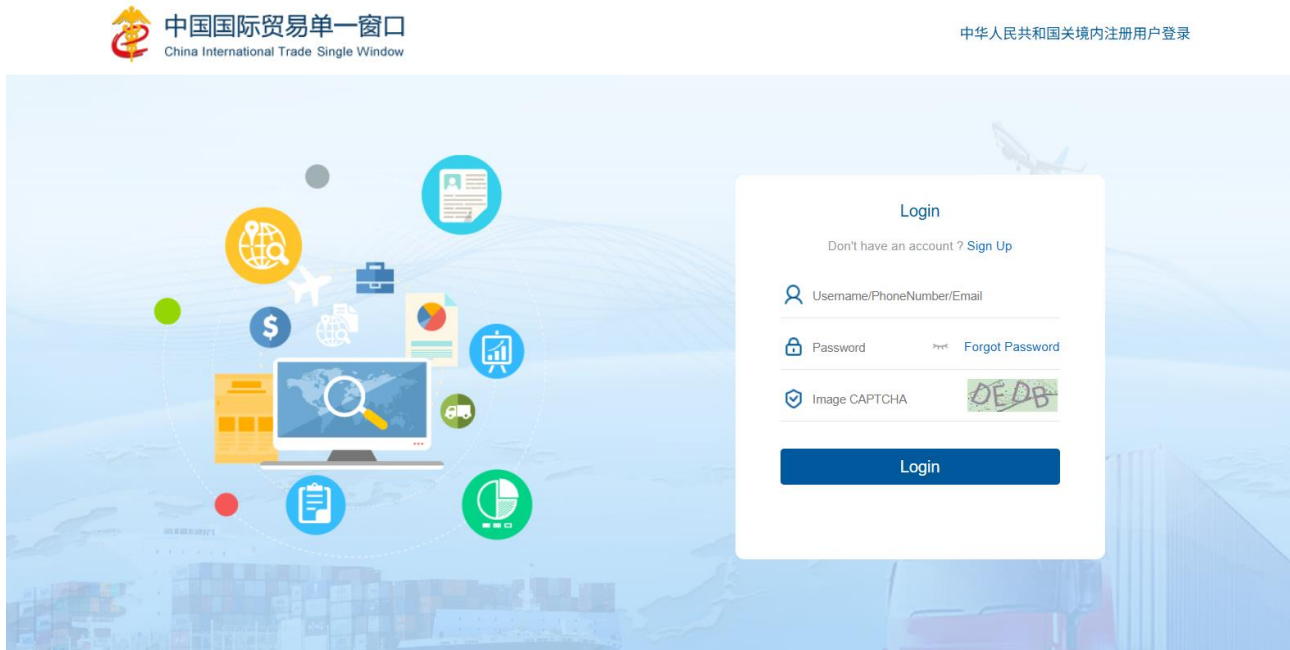

Figure: System Login

2. On the reset password page, input the Username, the Email that was used to register this account, and the Picture verification Code. After that, click the **[Send email verification code]** button.

3. Your email account will receive an email with the verification code. Please input the verification code in the field “E-mail verification code”. Then click the **[Submit]** button.

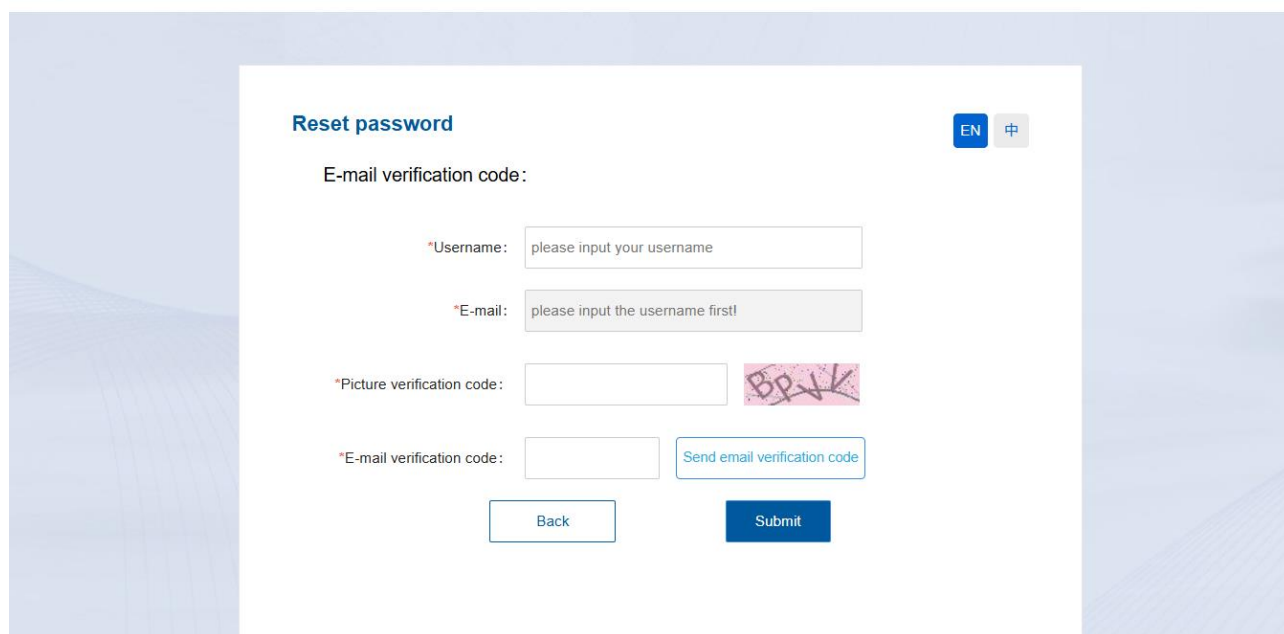

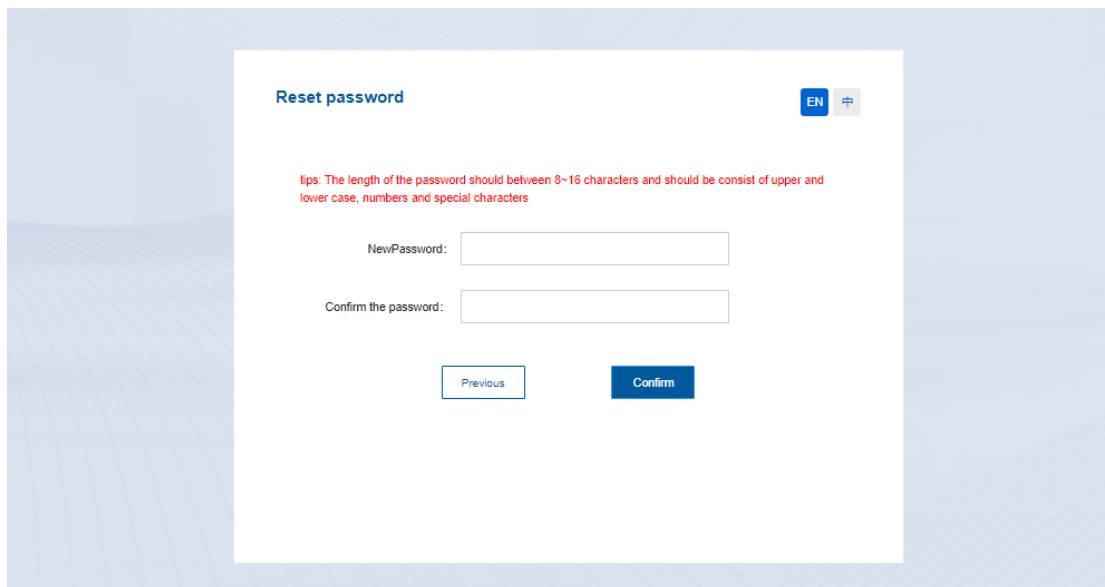

Figure: Reset password Page

4. Once your email verification is complete, you will be redirected to the reset password page. Please enter your new password as instructed, ensuring that the entries in the “New Password” and “Confirm New Password” fields match, and then click the **[Confirm]** button. The system will notify you whether the password change was successful. (Please note: Your password must be 8–16 characters long and must include a combination of at least three of the following: uppercase and lowercase letters, numbers, and symbols.)

5. After the password is reset successfully, the system automatically returns to the login page. You may use the new password to log in to the system.

4.4 Edit Account Information

If there are changes to an overseas manufacturer's account information, users can update it through the "User Management" function. Please note that this only modifies the manufacturer's account information and will not affect registration applications that have already been approved in China or are currently being processed.

To make changes, log in to the system, click the manufacturer name in the upper-right corner to access the "**Account Information**" page, update the information in the corresponding fields, and then save your changes. The information that can be modified includes: Contacts, Contact Number, Organisation Name, Department, Job Title, Address, Contact Fax, Notes, and Email Address.

To reset your password, you must verify your identity by entering a verification code sent to your email. Please ensure that the email address associated with your account remains active at all times to avoid any issues with password recovery.

4.5 Manufacturer Account Certification

Accounts for overseas manufacturers are created assigned by the competent authority, and their verification status is “Authenticated”. Accounts created by manufacturers themselves have a verification status of “Unauthenticated”. If a manufacturer wishes to verify its account, it may submit a verification application to the competent authority through the “**Account Certification**” function.

After logging into the system, overseas users may click the “**Account Certification**” option in the left menu. The current application status is displayed in red text at the top of the page, with the following categories: “Uncertified” (Not verified by the competent authority), “Submitted to Competent Authority” (Pending verification), “Rejected” (Certification application disapproved by the competent authority), “Certified” (Certification approved).

Basic account information displayed on the account certification application page cannot be edited.

Before submitting the verification application, please select the “Name of Competent Authority of Country (Region)”. this is a required field, and the account verification application will be submitted to the selected competent authority.

Figure: Account Certification

Click the [提交 (commit)] button to submit the certification application to the competent authority. At this point, the page will be grayed out and become unresponsive. If the competent authority refuses the certification, the application will be returned to the manufacturer, which can resubmit it. If the certification is approved, the page will remain grayed out and unresponsive, while the red status text at the top of the page will update to “Certified”.

Part V Registration of Manufacturers

5.1 Introduction to Application Methods

5.1.1 Product Categories

In accordance with the “Registration Provisions”, Food products subject to registration requirements for overseas manufacturers of imported food are categorized as follows: the Catalog of Imported Foods Requiring Official Recommendation for Registration (hereinafter referred to as “products subject to official recommendation for registration”), and products that manufacturers apply for registration independently. Among these, products subject to official recommendation for registration include:

Meat and meat products, Casings, Bird's nest and bird's nest products, Bee products, Eggs and egg products, Edible fats and oils, Stuffed pastry products, Edible grains, Grain milling industrial products and malt, Dehydrated vegetables, Seasoning powder, Nuts and seeds, Dried fruits, Special dietary foods (excluding milk-based infant formula), Functional foods, Dairy Aquatic products.

Products that manufacturers apply for registration independently include: Frozen fruits, Vegetables and vegetable products (Fresh and dehydrated vegetables are excluded), Grain products and other products, Tea, Nuts and seeds products, Alcoholic beverages, Beverages and Frozen beverages, Biscuits, Cakes and bread, Sugars (including raw sugar, sugar, lactose, syrup, etc.), Confectionery, Chocolate (including chocolate, cocoa butter substitute chocolate and its products), Seasoning (excluding sugar), Confectionery, Chocolate (including chocolate, cocoa butter substitute chocolate and its products), Fruit products and Other miscellaneous food products.

5.1.2 Application Registration Method

The registration application method refers to the specific channels and procedures through which manufacturers submit registration applications to the GACC. The system supports the following three main registration application methods: Standard Application Route (via Competent Authority Recommendation), Standard Application Route (Direct Submission to GACC), List-based Registration Route.

When manufacturers apply for new registration, modification, renewal, or cancellation, they may independently choose the registration method. The approval workflows and required supporting documents vary depending on the registration method. Manufacturers are advised to select the appropriate method based on their specific circumstances.

Once an application is successfully submitted, the selected registration method cannot

be modified. Manufacturers are advised to proceed with caution. The following sections provide detailed explanations of each registration method.

5.1.2.1 Standard Application Route (via Competent Authority Recommendation)

The Standard Application Route (via recommendation by the competent authority) applies to the registration of overseas food manufacturers whose products fall under the food categories listed in the “Catalog of Imported Foods Requiring Official Recommendation for Registration”.

When a manufacturer chooses this procedure, its registration application is forwarded to the competent authority in its country (region) for review and inspection. After the competent authority confirms that the manufacturer meets the registration requirements, it provides an audit and inspection report and a letter of recommendation to the GACC, recommending the application to proceed to the GACC’s evaluation and review stage. During the review and inspection process; if the competent authority finds that the application materials are incomplete, contain errors, or require further clarification, the application will be returned to the manufacturer with a request to complete or correct the information. The manufacturer may resubmit the application after making the necessary corrections; there is no need to initiate a new application. If the competent authority determines that the manufacturer does not meet the recommendation criteria and decides not to recommend it, the application process will be terminated.

During the evaluation and review by the GACC, if the application materials are found to be incomplete, contain errors, or require further clarification, the application will be returned to the competent authority of the manufacturer’s country (region) of origin, and the application status will change to “To be corrected by authorities”. The competent authority may either supplement the materials and resubmit the recommendation directly to the GACC, or return the application to the manufacturer

for correction and supplementation before resubmitting it for review and recommendation. Once the materials have been corrected, simply resubmit them following the original process; there is no need to initiate a new application.

If the GACC decides not to grant registration during the evaluation and review process, the application status will change to “Refused by the GACC,” and the application process will be terminated. If the manufacturer wishes to proceed, it must submit a new application.

5.1.2.2 Standard Application Route (Direct Submission to GACC)

The Standard Application Route (Direct submission to GACC) applies to the registration of overseas food manufacturers across all food categories (See Section 5.1.1).

For manufacturers choosing this registration method, the process is divided into two scenarios:

Scenario 1: Overseas manufacturers listed in the “Catalog of Imported Foods Requiring Official Recommendation for Registration”

Manufacturers selecting this registration method must undergo an on-site review and inspection by the competent authority of the country (region) of origin and obtain an audit and inspection report and a letter of recommendation. When submitting the application, the manufacturer must also submit the relevant materials issued by the competent authority of the country (region) of origin. After the application is submitted, it will be forwarded directly to the GACC for subsequent evaluation and review. It will not be forwarded to the competent authority.

It should be noted that whether this application method is open is determined by the competent authority of the country (region) based on its administrative arrangements.

During the evaluation and review by the GACC, if the application materials are found

to be incomplete, contain errors, or require further clarification, the application will be returned to the competent authority of the manufacturer's country (region) of origin, and the application status will change to "To be corrected by authorities". The competent authority may either supplement the materials and resubmit the recommendation directly to the GACC, or return the application to the manufacturer for correction and supplementation before resubmitting it for review and recommendation. Once the materials have been corrected, simply resubmit them following the original process; there is no need to initiate a new application.

If the GACC decides not to grant registration during the evaluation and review process, the application status will change to "Refused by the GACC," and the application process will be terminated. If the manufacturer wishes to proceed, it must submit a new application.

Scenario 2: Overseas Manufacturers of Foods Not Listed in the Catalog

The term "foods not listed in the catalog" herein means food products of overseas manufacturers that shall complete registration via independent applications submitted by the manufacturers themselves.

For manufacturers selecting this registration method, once the registration application is submitted, it will be forwarded directly to the GACC for subsequent evaluation and review.

During the evaluation and review by the GACC, if the application materials are found to be incomplete, contain errors, or require further clarification, the application will be returned to the manufacturer for correction and supplementation. Once the materials have been corrected, the manufacturer may resubmit them following the original process. There is no need to create a new application. If the GACC decides not to approve registration, the application process is terminated, and the manufacturer must

initiate a new application if it wishes to proceed.

5.1.2.3 List-based Registration Route

In accordance with the “Registration Provisions”, if the GACC has entered into a written agreement with the competent authority of the relevant country (region) to adopt the “list-based registration method” for its manufacturers, the manufacturer may choose the “list-based registration method” to apply for registration.

If a manufacturer chooses the “list-based registration method”, the application will be submitted to the competent authority in its country (region). The application process for the list-based registration method is similar to that of the Standard Application Route (via Competent Authority Recommendation), with the difference lying in the official agency receiving the application: for the standard application method, the competent authority to which the application is submitted is the authority in the country (region) responsible for the corresponding food product; whereas for the list-based registration method, the competent authority to which the application is submitted is the authority in the country (region) specifically responsible for list-based registration. During the review and inspection process, if the competent authority finds that the application materials are incomplete, contain errors, or require further clarification, the application will be returned to the manufacturer with a request to complete or correct the information. The manufacturer may resubmit the application after making the necessary corrections; there is no need to initiate a new application. If the competent authority determines that the manufacturer does not meet the recommendation criteria and decides not to recommend it, the application process will be terminated.

Under this model, the competent authority may take advantage of the convenience of submitting batch recommendations for registration to the GACC.

During the evaluation and review by the GACC, if the application materials are found

to be incomplete, contain errors, or require further clarification, the application will be returned to the competent authority of the manufacturer's country (region) of origin, and the application status will change to "To be corrected by authorities". The competent authority may either supplement the materials and resubmit the recommendation directly to the GACC, or return the application to the manufacturer for correction and supplementation before resubmitting it for review and recommendation. Once the materials have been corrected, simply resubmit them following the original process; there is no need to initiate a new application.

If the GACC decides not to grant registration during the evaluation and review process, the application status will change to "Refused by the GACC," and the application process will be terminated. If the manufacturer wishes to proceed, it must submit a new application.

5.2 General Functions

1. Filling Out the Application: On this system's data entry screen, please follow these general rules:

- (1) Fields marked with *: Required fields; valid information must be entered before submission;
- (2) Fields not marked with *: Optional fields, enter information as appropriate;
- (3) Fields with a gray background: These are non-editable and typically contain information automatically populated by the system or information that has passed evaluation and review;
- (4) Red prompts: During data entry, if a red prompt appears next to a field, it indicates that the current input does not meet the requirements; please make corrections according to the system prompt;
- (5) Blue buttons: These are function buttons used to perform operations such as saving,

submitting, and querying.

(6) Registration application materials must be submitted in Chinese or English.

2. **Save:** This function is typically located in the upper-left corner of the application page and is used to temporarily save the information and attachments you have entered. This action does not constitute submission of the application. After saving a draft, you may delete it at any time, or continue editing it and, once completed, formally submit it to the competent authority of the country (region) of origin or to the GACC.

Applications that have been returned by the competent authority of the country (region) of origin or the GACC for review and inspection, and are in the “To be corrected by enterprise” status, can be saved as drafts.

The screenshot shows a web form for manufacturer registration. At the top left are 'Save' and 'Delete' buttons. Below them is a yellow information box stating: 'Enterprises applying for registration through this system shall be overseas manufacturers of production, processing, and storage. Trading companies and other non-qualifying entities are exempt from registration via this system.' The form has two main sections. The first section, '*Application Registration Method', contains three radio buttons: 'Standard Application Route (via Competent Authority Recommendation)', 'Standard Application Route (Direct Submission to GACC)', and 'List-based Registration Route'. To the right is a field for '*Name of competent authority of the country or region' with a placeholder text 'Support fuzzy query, please press the space'. Below these is a horizontal tab bar with four tabs: 'Basic information' (selected), 'Production information', 'Check list and statement', and 'Attachment Information'. Under the 'Basic information' tab, the title is 'Basic information of the manufacturer'. It contains three input fields: 'Country (Region)' with a dropdown menu showing 'Malaysia', 'Registration number for food production approval issued by the competent food safety authority in the country/region of origin' with a text input field, and 'Name of the registration and approval competent authority of the country or region' with a text input field.

Figure: manufacturer basic information

3. **Preview:** This function is located at the bottom of the “Attachment information” page. After clicking the [Preview] button, the page will switch to preview mode, consolidating the four sections (Basic information, Production-related information, Declaration information, Attachment information) into a single view. This allows you to review the completeness and accuracy of all submitted content and attachments before submission. Once you have confirmed that everything is correct, you may formally submit the application to the competent authority of the country (region) of origin or to the GACC for review (this function applies to both registration applications and modification applications).

SaveDelete

current state : Enterprise temporary saved

Enterprises applying for registration through this system shall be overseas manufacturers of production,processing,and storage.Trading companies and other non-qualifying entites are exempt from registration via this system.

4. Submit: The “Submit” operation must be performed in preview mode. Click the [Submit] button at the bottom of the page, and the system will formally submit the temporarily stored registration application data to the competent authority of the country (region) of origin or the GACC for review and inspection, based on the registration application method selected by the overseas manufacturer. Once an application has been submitted, the manufacturer will no longer be able to add, delete, or modify that application.

After submitting the application, you can track its review status through the “Comprehensive enquiry - Application enquiry” function to ensure timely cooperation with requests from the competent authority or the GACC to supplement or modify application information and materials during the review and inspection process.

5. **Return:** Exit preview mode and revert to page-by-page entry and view mode. (Applicable to registration and modification applications)
6. **Delete:** After saving the draft, click the **[Delete]** button to remove the current application data. This operation is irreversible, and the relevant data cannot be recovered.
7. **Withdraw:** After the application is submitted to the competent authority, the **[Withdraw]** button will be displayed at the top left of the application page. If no action has been taken by the competent authority (Status: Submitted to Competent Authority), the overseas manufacturer may withdraw the application for revision and resubmit it after modification.

5.3 Registration Application

Overseas manufacturers engaged in the production, processing, and storage of food for China may use this function to submit documentation and apply to the GACC for registration as a food production manufacturer. To access this function, manufacturers should log in to the system and click the “**Application for Registration**” menu on the left.

Figure: Product Selection for Registration Application

Select the products relevant to your manufacturer's registration. If you hover your mouse over a product icon  and a message appears stating: "This product category cannot be registered in your country (region)", it means your manufacturer cannot register products in that category. You can search for product categories using the **"Product Category Search"** function by entering an HS code or product name. For specific instructions, please refer to Section 5.11 of this document.

5.3.1 Registration of Overseas Food Manufacturers Requiring Official Recommendation for Registration (Taking Stuffed pastry products as an Example)

Meat and meat products, Casings, Bird's nest and bird's nest products, Bee products, Eggs and egg products, Edible fats and oils, Edible oils and oilseeds, Stuffed pastry products, Edible grains, Grain milling industrial products and malt, Dehydrated vegetables, Seasoning powder, Nuts and seeds, Dried fruits, Special dietary foods(excluding milk-based infant formula), Functional foods, Dairy, and Aquatic products are subject to the registration requirements set forth in this chapter.

This section takes the registration of stuffed pasta products as an example.

During data entry, we recommend saving your work frequently to prevent data loss due to network issues or session timeouts. The following explains the steps and key fields:

Step 1: Select the products covered by the manufacturer registration.

Step 2: Go to the application page and select the appropriate application registration method.

Application Registration Method: The registration process varies depending on the selected method (See Section 5.1.2).

Name of competent authority of the country or region: Select the competent authority of the country (region) of origin based on the chosen registration method. This competent authority is the official agency responsible for reviewing and inspecting the manufacturer's registration application via the system. It is also the designated recipient to which the system forwards the application. If the manufacturer fails to accurately select the corresponding competent authority, the application cannot be properly forwarded to the authorized reviewing agency, which will impact the processing progress.

Step 3: Fill out the application information, including: Basic information, Production-related information, Declaration information, and Attachment information.

Registration number for food production approval issued by the competent food safety authority in the country/region of origin: This field is auto-populated by the system based on account information. (See Section 4.2).

Name of the registration and approval competent authority of the country or region: Generally refers to the competent authority in a foreign country that officially approved the establishment of the manufacturer; this field is optional.

Registration Number (In China) / Registration Date (In China) / Registration expiration date (In China): Once the registration application has been reviewed and approved, the GACC will assign the information, which will be automatically

populated by the system. Manufacturers may not enter this information themselves. Manufacturers can view the relevant information using the application enquiry function.

Manufacturer name: Auto-populated by the system based on account information, editable, required.

Enterprise identification documents: This field is required. Relevant attachments shall be uploaded.

Figure: Production-related information

Products to be registered/added to China: Information regarding the specific products for which you are applying to export to China—including HS codes, CIQ codes, and product names—is required. After clicking the **[Add]** button, a product information entry screen will pop up; each screen supports the entry of only one product. If you need to enter multiple products, please save the current product and click **[Add]** again to add another.

For officially recommended products, when applying for registration of overseas aquatic product manufacturers, there is no need to fill in specific product information

29 / 78

(such as HS codes, CIQ codes, and product names) during the application stage. The registered product information will be uniformly categorized and displayed as “Aquatic Products”. Once the application is evaluated and approved by the GACC, the system will automatically grant the relevant qualifications for exporting aquatic products to China. Registered aquatic product manufacturers can view the scope of products eligible for export to China through the “Comprehensive Enquiry – Registered in China” function in the registration system.

Trade with China in the last two years: This field is required. Select “Yes” to fill in the subsequent form, or select “No” to skip this section. If Yes is selected, the trade record form will pop up. Click **[Add]** to access the trade data entry page. The dropdown options for “Specific products for export to China” are automatically populated from the products specified in “Products to be registered/added to China”.

Raw material/ingredient information: This field is optional. Click **[Add]** to open the Raw material/ingredient information window. The options for “Specific products for export to China” are preloaded from the entries completed in “Products to be registered/added to China”.

Use situation of pesticide: This field is required. Select “No Pesticides Used” to skip the form; select “Use of pesticides” to complete the pesticide usage form below. Click **[Add]** to open the pesticide record entry page. The dropdown options for “Specific products for export to China” are automatically populated from the entries under “Products to be registered/added to China”.

Production correspondence: This field is required. Click **[Add]** to open the Production correspondence entry window. The options for “Specific products for export to China” are populated from the previously filled information under “Products to be registered/added to China”.

Figure: Attachment Information

Attachment Information: This page consolidates all attachments uploaded on the Basic information, Production-related information and Check list and statement. Overseas manufacturers may check the list to verify that no attachments marked required “Yes” are missing.

Fill in Basic information, Production-related information, Check list and attachment details one by one, and then submit the “Declaration of the Manufacturer”. Once you have completed the form, click the **[Preview]** button. The system will display all the information you have entered for you to review. If you need to make changes, click **[Return]** to return to the application screen and make adjustments.

32 / 78

Step 4: Submit the application. Depending on the registration application method selected in the previous step, the application will be forwarded to the competent authority or the GACC.

After confirming that the information is correct, click the **[Submit]** button. Depending on the registration method selected by the manufacturer, the system will automatically forward the application to the competent authority of the country (region) of origin or submit it directly to the GACC for review. Once the application is submitted, the company will no longer be able to add, delete, or modify the application details.

Step 5: Pending evaluation and review. You can check the status of your application via the Application Enquiry function.

After submitting an application, manufacturers can track the review status through “Comprehensive Enquiry - Application Enquiry” to ensure they promptly comply with any requests from their country (region) or the GACC to supplement or modify application information and materials during the review process. (See Section 5.10.1.)

After review and evaluation by GACC, applications meeting the registration requirements shall be registered and issued a registration number in China.

During the review and inspection process, if the competent authority finds that the application materials are incomplete, contain errors, or require further clarification, the application will be returned to the manufacturer with a request to complete or correct the information. The manufacturer may resubmit the application after making the necessary corrections; there is no need to initiate a new application. If the competent authority determines that the manufacturer does not meet the recommendation criteria and decides not to recommend it, the application process will be terminated.

During the evaluation and review by the GACC, if the application materials are found to be incomplete, contain errors, or require further clarification, the application will be

returned to the competent authority of the manufacturer's country (region) of origin, and the application status will change to "To be corrected by authorities". The competent authority may either supplement the materials and resubmit the recommendation directly to the GACC, or return the application to the manufacturer for correction and supplementation before resubmitting it for review and recommendation. Once the materials have been corrected, simply resubmit them following the original process; there is no need to initiate a new application.

If the GACC decides not to grant registration during the evaluation and review process, the application status will change to "Refused by the GACC," and the application process will be terminated. If the manufacturer wishes to proceed, it must submit a new application.

To reduce the burden of repetitive data entry for manufacturers, the system supports one-click copying of content from previous applications. When reapplying for the same product category with a prior rejected application (Refused by authorities or Refused by the GACC), the system will pop up a prompt: "You have a similar application that was rejected by the competent authority of your country(region)/GACC. Do you want to amend it on the basis of the last application?" If you select **[OK]**, the system will automatically copy the content from your previous application to create a new draft. You can then use this draft as a basis to revise and improve your application item by item based on the reasons for the previous rejection before resubmitting it. If you select **[Cancel]**, you will be taken to a blank application page.

5.3.2 Registration of Overseas Food Manufacturers via Independent Application (Taking Chocolate Manufacturer Registration as an Example)

Frozen fruits, Vegetables and vegetable products (Fresh and dehydrated vegetables are excluded), Grain products and other products, Tea, Nuts and seeds products, Alcoholic

beverages, Beverages and Frozen beverages, Biscuits, Cakes and bread, Sugars (including raw sugar, sugar, lactose, syrup, etc.), Confectionery, Chocolate (including chocolate, cocoa butter substitute chocolate and its products), Seasoning (excluding sugar), Confectionery, Chocolate (including chocolate, cocoa butter substitute chocolate and its products), Fruit products, and Other miscellaneous food products are subject to the registration requirements outlined in this chapter.

This section takes the registration of Chocolate as an example.

During data entry, we recommend saving your work frequently to prevent data loss due to network issues or session timeouts. The following explains the steps and key fields:

Step 1: Select the products covered by the manufacturer registration.

Step 2: Go to the application page and select the appropriate application registration method.

Application Registration Method: The registration process varies depending on the selected method (See Section 5.1.2).

Name of competent authority of the country or region: Select the competent authority of the country (region) of origin based on the chosen registration method. If you select “List-Based Registration” as your registration method, you must fill in this information. The competent authority is the official agency responsible for reviewing and inspecting the manufacturer’s registration application through the system, and it is also the designated recipient to whom the system will forward the application.

Enterprise Commitments:

☐ (1)The applicant entity must be a manufacturer engaged in production, processing,or an operator of a cold storage facility(Note:Trading companies,non-manufacturing entites,or ordinary storage facilities need not apply for registration).
☐ (2)Approved by and under the effective supervision of the competent food safety authority in the country/region of origin.
☐ (3)The production of such food is approved by the competent food safety authority in the country/region of origin with valid certification(corresponding to the uploaded "Production License issued by the competent food safety authority in the country/region of origin").
☐ (4)Has established an effective food safety,hygiene management,and protection system;legally produces and exports in the country/region of origin;and guarantees that food exported to China complies with relevant Chinese laws,regulations,and national food safety standards.
☐ (5)The application information matches the submitted supporting documents in content and authenticity.If inconsistencies or false declarations are found,the applicant shall bear all legal consequences,including revocation of China registration,product rejection/destruction,and investigation by the competent food safety authority in the country/region of origin.
☐ (6)Will cooperate with the General Administration of Customs of China(GACC) in food safety assessment reviews.
☐ (7)Will actively comply with all GACC requests during assessment,including providing additional verification materials or facilitating verification of submitted documents by the competent food safety authority in the country/region of origin.
☐ (8)Proactively fulfills food safety responsibilities.Upon identifying food safety risks or non-compliance with registration requirements,shall suspend exports to China and implement corrective measures until full compliance is achieved.

Registered product category: When applying to export specific products to China, the system automatically populates the “Registered Product Category”. Once the application is approved, all products already approved under that category for the relevant country (region) will be automatically assigned to the manufacturer, eliminating the need to list specific products one by one.

However, for the registration of manufacturers dealing in Vegetables and vegetable products (Fresh and dehydrated vegetables are excluded) , Grain products and other products, Tea, and frozen fruits, you must click the [Add] button to enter specific product information item by item, including the HS code, CIQ code, and product name. Each screen supports the entry of only one item. If you are exporting multiple products under the same category to China (products with different HS codes or CIQ codes must

be entered separately), please save your changes and click [Add] again to add additional entries. Please be sure to fill in the information correctly.

Production and processing situation: This section covers Processing flow chart, Actual Product Photos, Product Label Sample, List of Ingredients, Floor plan of the Enterprise's Factory Premises, Workshops, or Cold Storage Facilities, Export Records for the last 3 times, Inspection Records from the Past 1 Year by the Competent Authorities and Other support materials. All items are optional. Manufacturers may upload supporting materials as needed.

Figure: Attachment Information

Attachment Information: This summary displays all attachments uploaded on the pages for Basic information and Production-related information. Overseas manufacturers can use the information in this list to check whether any attachments marked as “Yes” are missing.

Fill in Declaration information, Basic information, Production-related information, and Attachment Information item by item, then submit the “Declaration of the

Manufacturer”. The system will display all the information you have entered for you to review. If you need to make changes, click **[Return]** to return to the application screen and make adjustments.

Step 4: Submit the application. Depending on the registration application method selected in the previous step, the application will be forwarded to the competent authority or the GACC.

If all information is confirmed to be accurate, click **[Submit]**. The system will automatically forward this application to the competent authority or the GACC.

Step 5: Pending evaluation and review. You can check the status of your application via the Application Enquiry function. (See Section 5.10.1.)

After submitting an application, manufacturers can track the review status through “Comprehensive Enquiry - Application Enquiry” to ensure they promptly comply with any requests from the GACC to supplement or modify application information and materials during the review process.

After review and evaluation by GACC, applications meeting the registration requirements shall be registered and issued a registration number in China.

If the “Standard Application Route (Direct Submission to GACC)” is selected for registration, and the GACC discovers during its evaluation and review that the manufacturer’s application materials are incomplete, contain errors, or require further clarification, it will request that the application be “To be corrected”. The application will then be returned to the manufacturer for supplementation and correction. If the GACC decides not to approve registration, the application process is terminated, and the manufacturer must initiate a new application if it wishes to proceed.

If the “List-Based Registration” method is selected, after the manufacturer submits the application, it will be forwarded to the competent authority of the country (region) of

origin. During the review and inspection process, if the competent authority finds that the application materials are incomplete, contain errors, or require further clarification, the application will be returned to the manufacturer with a request to complete or correct the information. The manufacturer may resubmit the application after making the necessary corrections; there is no need to initiate a new application. If the competent authority determines that the manufacturer does not meet the recommendation criteria and decides not to recommend it, the application process will be terminated.

During the evaluation and review by the GACC, if the application materials are found to be incomplete, contain errors, or require further clarification, the application will be returned to the competent authority of the manufacturer's country (region) of origin, and the application status will change to "To be corrected by authorities". The competent authority may either supplement the materials and resubmit the recommendation directly to the GACC, or return the application to the manufacturer for correction and supplementation before resubmitting it for review and recommendation. Once the materials have been corrected, simply resubmit them following the original process; there is no need to initiate a new application.

If the GACC decides not to grant registration during the evaluation and review process, the application status will change to "Refused by the GACC," and the application process will be terminated. If the manufacturer wishes to proceed, it must submit a new application.

To reduce the burden of repetitive data entry for manufacturers, the system supports one-click copying of content from previous applications. When reapplying for the same product category with a prior rejected application (Refused by the competent authorities or Refused by the GACC), the system will pop up a prompt: "You have a similar application that was rejected by the competent authority of your

country(region)/GACC. Do you want to amend it on the basis of the last application?” If you select **[OK]**, the system will automatically copy the content from your previous application to create a new draft. You can then use this draft as a basis to revise and improve your application item by item based on the reasons for the previous rejection before resubmitting it. If you select **[Cancel]**, you will be taken to a blank application page.

5.4 Application for Modification

In accordance with “Registration Provisions”, if any registration information changes during the validity period of the registration, a request for modification shall be submitted to the GACC through the original designated registration channel. This module provides manufacturers with the ability to apply for modification to their obtained registrations in China. After logging into the system, click **"Application for Modification"** in the left-hand menu to view all of the manufacturer’s approved registrations in China. Please select one registration to apply for modification.

Figure: Modification Application Inquiry

5.4.1 Registration Modifications for Overseas Food Manufacturers Subject to Official Recommendation (Using the Registration Modification for a Seasoning powder Manufacturer as an Example)

Meat and meat products, Casings, Bird's nest and bird's nest products, Bee products, Eggs and egg products, Edible fats and oils, Stuffed pastry products, Edible grains, Grain milling industrial products and malt, Dehydrated vegetables, Seasoning powder, Nuts and seeds, Dried fruits, Special dietary foods (excluding milk-based infant formula), Functional foods, Dairy, and Aquatic products are subject to the registration requirements outlined in this chapter.

This section will use the registration modification for Seasoning powder as an example. During data entry, we recommend saving your work frequently to prevent data loss due to network issues or session timeouts. The following explains the steps and key fields:

Step 1: The system displays a list of the manufacturer's currently valid registrations in China. The manufacturer selects the registration it wishes to modify, clicks the **[Modify]** button, and the system creates a modification request. It populates the existing valid registration information on the modification request page.

Step 2: Go to the application page and select the appropriate application registration method.

Application Registration Method: The registration process varies depending on the selected method (See Section 5.1.2).

Name of competent authority of the country or region: Select the competent authority of the country (region) of origin based on the chosen registration method. This competent authority is the official agency responsible for reviewing and inspecting the manufacturer's registration application via the system. It is also the designated recipient to which the system forwards the application. If the manufacturer

fails to accurately select the corresponding competent authority, the application cannot be properly forwarded to the authorized reviewing agency, which will impact the processing progress.

Figure: modification application–Attachment Information

Attachment Information: This summary displays all attachments uploaded on the pages for basic information and production-related information. Overseas

manufacturers may check the list to verify that no attachments marked required “Yes” are missing.

Once you have completed the form, click the **[Preview]** button. The system will display all the information you have entered for you to review. If you need to make changes, click **[Return]** to return to the application screen and make adjustments.

Step 4: Submit the application. After confirming that the information is correct, click the **[Submit]** button. Depending on the registration method selected by the manufacturer, the system will automatically forward the application to the competent authority of the country (region) of origin or submit it directly to the GACC for review.

Step 5: Pending evaluation and review.

After submitting an application, manufacturers can track the review status through “Comprehensive Enquiry—Application Enquiry” to ensure they promptly comply with any requests from their country (region) or the GACC to supplement or modify application information and materials during the review process. (See Section 5.10.1.)

After conducting a review and evaluation, the GACC will approve applications for modification that meet the requirements. The manufacturer’s registration information will be updated in accordance with the details provided in the modification application, and the registration number and validity period already granted in China will remain unchanged. If the application is not approved, the registration information will remain the same as before the modification.

During the review and inspection process, if the competent authority finds that the application materials are incomplete, contain errors, or require further clarification, the application will be returned to the manufacturer with a request to complete or correct the information. The manufacturer may resubmit the application after making the necessary corrections; there is no need to initiate a new application. If the competent

authority determines that the manufacturer does not meet the recommendation criteria and decides not to recommend it, the application process will be terminated.

During the evaluation and review by the GACC, if the application materials are found to be incomplete, contain errors, or require further clarification, the application will be returned to the competent authority of the manufacturer's country (region) of origin, and the application status will change to "To be corrected by authorities". The competent authority may either supplement the materials and resubmit the recommendation directly to the GACC, or return the application to the manufacturer for correction and supplementation before resubmitting it for review and recommendation. Once the materials have been corrected, simply resubmit them following the original process; there is no need to initiate a new application.

If the GACC decides not to grant registration during the evaluation and review process, the application status will change to "Refused by the GACC," and the application process will be terminated. If the manufacturer wishes to proceed, it must submit a new application.

5.4.2 Registration Modifications for Overseas Food Manufacturers via Independent Application (Using the Registration Modification for a Plant Beverage Manufacturer as an Example)

Frozen fruits, Vegetables and vegetable products (Fresh and dehydrated vegetables are excluded) , Grain products and other products, Tea, Nuts and seeds products, Alcoholic beverages, Beverages and Frozen beverages, Biscuits, Cakes and bread, Sugars (including raw sugar, sugar, lactose, syrup, etc.), Confectionery, Chocolate (including chocolate, cocoa butter substitute chocolate and its products), Seasoning (excluding sugar), Confectionery, Chocolate (including chocolate, cocoa butter substitute chocolate and its products), Fruit products, and Other miscellaneous food products are

subject to the registration requirements outlined in this chapter.

During data entry, we recommend saving your work frequently to prevent data loss due to network issues or session timeouts. The following explains the steps and key fields:

Step 1: The system displays a list of the manufacturer's currently valid registrations in China. The manufacturer selects the registration it wishes to modify, clicks the **[Modify]** button, and the system creates a modification request. It populates the existing valid registration information on the modification request page.

Step 2: Go to the application page and select the appropriate application registration method.

Application Registration Method: The registration process varies depending on the selected method (See Section 5.1.2).

Name of competent authority of the country or region: Select the competent authority of the country (region) of origin based on the chosen registration method (If you select "Standard Application Route (Direct Submission to GACC)" as your registration method, this field is not required.) The competent authority is the official agency responsible for reviewing and inspecting the manufacturer's registration application through the system, and it is also the designated recipient to whom the system will forward the application. If the manufacturer fails to accurately select the corresponding competent authority, the application cannot be properly forwarded to the authorized reviewing agency, which will impact the processing progress.

Products to be registered to China: When applying to export specific products to China, the system automatically populates the “Registered Product Category”. Once the application is approved, all products already approved under that category for the relevant country (region) will be automatically assigned to the manufacturer, eliminating the need to list specific products one by one.

When applying for a modification registration, manufacturers of registered Vegetables and vegetable products (Fresh and dehydrated vegetables are excluded), Grain products and other products, Tea, and frozen fruits products must list both the Products to be registered/added to China and Qualification obtained of registered in China: Both are product information lists displaying details such as HS codes, CIQ codes, and product names. The “Qualification obtained of registered in China” list shows products that have previously obtained export eligibility to China. To modify an entry, click the **[Edit]**

button next to the corresponding entry; to delete an entry, click the **[Delete]** button. The “Products to be registered/added to China” list is used to enter products that have not yet obtained registration qualifications but need to be added in this round. Click **[Add]** to enter each item individually; multiple products must be entered as separate entries.

Figure: Attachment Information

Attachment Information: This summary displays all attachments uploaded on the pages for basic information and production-related information. In addition to the corresponding attachments, manufacturers are required to upload “Supporting materials to modify information”. Overseas manufacturers may check the list to verify that no attachments marked as required “Yes” are missing.

Once you have completed the form, click the **[Preview]** button. The system will display

all the information you have entered for you to review. If you need to make changes, click **[Return]** to return to the application screen and make adjustments.

Step 4: Submit the application. After confirming that the information is correct, click the **[Submit]** button. Depending on the registration method selected by the manufacturer, the system will automatically forward the application to the competent authority of the country (region) of origin or submit it directly to the GACC.

Step 5: Pending evaluation and review. Pending evaluation and review. You can check the status of your application via the Application Enquiry function. (See Section 5.10.1.) After submitting an application, manufacturers can track the review status through **“Comprehensive Enquiry—Application Enquiry”** to ensure they promptly comply with any requests from their country (region) or the GACC to supplement or modify application information and materials during the review process.

After conducting a review and evaluation, the GACC will approve applications for modification that meet the requirements. The manufacturer’s registration information will be updated in accordance with the details provided in the modification application, and the registration number and validity period already granted in China will remain unchanged. If the application is not approved, the registration information will remain the same as before the modification.

If the “Standard Application Route (Direct Submission to GACC)” is selected for registration, and the GACC finds during its evaluation and review that the manufacturer’s application materials are incomplete, contain errors, or require further clarification, it will request that the application be “To be corrected”. The application will then be returned to the manufacturer for supplementation and correction. If the GACC decides not to approve registration, the application process is terminated, and the manufacturer must initiate a new application if it wishes to proceed.

If the “List-Based Registration” method is selected, after the manufacturer submits the application, it will be forwarded to the competent authority of the country (region) of origin. During the review and inspection process, if the competent authority finds that the application materials are incomplete, contain errors, or require further clarification, the application will be returned to the manufacturer with a request to complete or correct the information. The manufacturer may resubmit the application after making the necessary corrections, there is no need to initiate a new application. If the competent authority determines that the manufacturer does not meet the recommendation criteria and decides not to recommend it, the application process will be terminated.

During the review and inspection process, if the competent authority finds that the application materials are incomplete, contain errors, or require further clarification, the application will be returned to the manufacturer with a request to complete or correct the information. The manufacturer may resubmit the application after making the necessary corrections, there is no need to initiate a new application. If the competent authority determines that the manufacturer does not meet the recommendation criteria and decides not to recommend it, the application process will be terminated.

During the evaluation and review by the GACC, if the application materials are found to be incomplete, contain errors, or require further clarification, the application will be returned to the competent authority of the manufacturer’s country (region) of origin, and the application status will change to “To be corrected by authorities”. The competent authority may either supplement the materials and resubmit the recommendation directly to the GACC, or return the application to the manufacturer for correction and supplementation before resubmitting it for review and recommendation. Once the materials have been corrected, simply resubmit them following the original process; there is no need to initiate a new application.

If the GACC decides not to grant registration during the evaluation and review process, the application status will change to “Refused by the GACC,” and the application process will be terminated. If the manufacturer wishes to proceed, it must submit a new application.

5.5 Application for Extension

In accordance with the “Registration Provisions”, the registration of overseas manufacturers shall remain valid for a period of five(5) years. Upon expiration of the registration’s validity period, the system will automatically renew the registration status for a period of 5 years. Overseas manufacturers listed on the list of products ineligible for automatic renewal (including Meat and meat products, Bird's nest and Bird's nest products), as well as those currently subject to import suspension or rectification, are not eligible for the automatic renewal policy.

The list of food items not eligible for automatic renewal may be adjusted in accordance with regulatory requirements; manufacturers are advised to promptly review the latest list information published by the GACC.

After logging into the system, manufacturers should click “Application for extension” in the left-hand menu to access the function page. The system will display all registrations in China under that manufacturer that are within 3 to 12 months of expiration and categorize them into the following three types based on the manufacturer’s registration status:

Query Condition

Product range

Inquire

Reset

5.5.1 Automatic Renewal (No Action Required)

5.5.2 Apply for an Extension Manually

Important Note: If there are any pending cancellation or revocation procedures for a registration in China, you may not submit a renewal application. Please wait until the relevant procedures are completed before proceeding. If the GACC has already initiated a revocation procedure for the manufacturer's registration in China, the GACC

will reject the manufacturer's renewal application once it is submitted.

The specific steps are as follows:

Step 1: Select the registration in China to be renewed. After logging into the system, click “Application for extension” in the left-hand menu to access the function page. The system will display all registrations in China under that manufacturer that are within 3 to 12 months of their expiration date. First, select the registration entry you wish to renew, then click the **[Extend]** button to create a renewal application.

Step 2: Select the application registration method. After entering the renewal application page, select the application registration method (See Section 5.1.2). The renewal process varies depending on the selected application registration method. The name of the competent authority of the country or region is typically a required field and is pre-populated by the system. If the drop-down menu displays multiple competent authorities, it is recommended to confirm with the competent authority in your country (region) before making a selection.

For registrations in China where “Registration of Overseas Food Manufacturers via Independent Application” was selected, if the application registration method selected is “Standard Application Route (Direct Submission to GACC)”, this field is not required.

Figure: Renewal Application Page

Step 3: Complete the renewal application. Fields marked with an asterisk * on the form are required. The information entered here is derived from your registration obtained in China. If you need to view the details of the registration in China for this renewal application, click the **[View Details]** button.

The following provides instructions for completing the application form:

Name of competent authority of the country or region: Please follow the system prompts; this field is typically required. The competent authority reviews and inspects applications submitted by manufacturers in its country (region) and recommends them to the GACC for registration. It is pre-populated by the system. If the drop-down menu displays multiple competent authorities, it is recommended to confirm with the competent authority of the country (region) of origin before making a selection. For registrations in China where “Registration of Overseas Food Manufacturers via Independent Application” was selected, if the application registration method selected is “Standard Application Route (Direct Submission to GACC)”, this field is not

required.

Declaration for the extension of registration of manufacturer: This attachment must be uploaded. A template provided by the system may be downloaded for reference.

Supporting materials to continue information: This attachment is optional. No template or specific formatting requirements apply. Manufacturers may upload supporting documents and certificates relevant to the renewal application, with multiple attachments allowed.

Audit and inspection report issued by the competent authority of the country/region of origin: This attachment is only required for renewal applications of manufacturer registrations under officially recommended product categories. Depending on the application registration method selected, the upload requirements are as follows: If the registration method selected is “standard application route (via competent authority recommendation)”, the competent authority may upload this document supplementally. If the application registration method selected is “standard application route (direct submission to GACC)”, the documents must be uploaded—you may download the template provided by the system for reference. If the registration method selected is “List-Based Registration”, no upload is required.

Declaration of conformity of enterprise’s extension registration by the competent authority: This attachment is only required for renewal applications of manufacturer registrations under officially recommended product categories. Depending on the registration method selected, the upload requirements are as follows: If the registration method selected is “standard application route (via competent authority recommendation)”, the competent authority may upload this document supplementally. If the application registration method selected is “standard application route (direct submission to GACC)”, the documents must be uploaded—you may download the

template provided by the system for reference. If the registration method selected is “List-Based Registration”, no upload is required.

Declaration of Compliance by Recommended Enterprises: Depending on the registration method selected, the upload requirements are as follows: If the registration method selected is “standard application route (via competent authority recommendation)” or “standard application route (direct submission to GACC)”, no upload is required. If the registration method selected is “List-Based Registration”, the competent authority may upload this document supplementally.

Upload attachments in accordance with page requirements based on the selected registration application method.

Step 4: Submit the application. If all information is confirmed to be accurate, click **[Submit]**. The system will automatically forward this application to the competent authority or the GACC according to the selected registration application method.

Step 5: Pending evaluation and review. Pending evaluation and review. You can check the status of your application via the Application Enquiry function. (See Section 5.10.1.) After submitting an application, manufacturers may track its review status via “**Comprehensive Enquiry–Application Enquiry**”. GACC shall approve the renewal for manufacturers in compliance with the requirements and extend the registration validity for an additional five years.

5.5.3 During the import suspension or rectification period (unavailable)

If a manufacturer’s registration in China is currently suspended or under rectification, the system will display a message indicating that the operation cannot be performed. The manufacturer will not be eligible for the automatic renewal policy and will not be able to submit a renewal application through the system. Manufacturers are advised to complete the rectification and resume imports as soon as possible. Renewal can only

be processed once the registration is reinstated.

5.6 Application for cancellation

Manufacturers that have obtained registration in China may independently submit cancellation applications through this module. In addition, the GACC will revoke the registration of any overseas food manufacturer that has failed to apply for registration renewal in accordance with regulations or that was established without the approval of the competent authority of the country (region) of origin and is not subject to effective supervision by the competent authority. Import declarations for food products shipped before the date of revocation will not be affected.

Log in to the system, click “**Application for Cancellation**” in the left-hand menu, and search for valid registrations eligible for cancellation.

Reminders:

1. A cancellation application cannot be initiated for valid China registrations under the status of import suspension, reinspection, or rectification.
2. Manufacturers may submit a cancellation application even if there are pending modification applications.
 - (1) If GACC approves the manufacturer’s cancellation application, any approved pending modification application will only update the information of the cancelled China registration and will not change its cancelled status.
 - (2) If the cancellation application is rejected, the ongoing modification application will not be affected and may proceed with subsequent procedures normally.

Figure: Cancellation application

Name of competent authority of the country or region: Please follow the system prompts; this field is typically required. Review and inspect applications submitted by manufacturers in your country (region) and recommend them to the GACC for registration. It is pre-populated by the system. If the drop-down menu displays multiple competent authorities, it is recommended to confirm with the competent authority in your country (region) before making a selection. For registrations in China under “Registration of Overseas Food Manufacturers via Independent Application”, if the application registration method selected is “Standard Application Route (Direct Submission to GACC)”, this field is not required.

Reason for cancellation: This field is required. Please state the reason for cancellation.

Supporting materials to cancel information: This attachment is optional. Click [Add File] in the list to open the file selection window. Select files as required for operation, and multiple attachments can be uploaded.

Step 4: Submit the application. If all information is confirmed to be accurate, click **[Submit]**. The system will automatically forward this application to the competent authority or the GACC according to the registration application method.

Step 5: Pending evaluation and review. You can check the status of your application via the Application Enquiry function. (See Section 5.10.1.)

After submitting an application, manufacturers may track its review status via **“Comprehensive Enquiry – Application Enquiry”**.

If the application for cancellation is approved, the GACC will deregister the manufacturer. If the application for cancellation is not approved, the manufacturer’s registration status remains unchanged. The manufacturer may check its registration status via **“Comprehensive Enquiry - Registered in China”** (See Section 5.10.2).

5.7 Notification

This module provides manufacturers with a service to look up various notices issued by the GACC. Notices received by businesses will directly affect their registered status in China, so please be sure to stay informed in a timely manner.

Notification types include: Announcement Notification, Registration Notification, Modification Notification, Import Suspension Notification, Import Resumption Notification, Revocation Notification, Cancellation Notification, and Extension Notification. Details are specified as follows:

Announcement Notification: Policy and public announcement information released by GACC. Such notifications are generally for information purposes only and will not directly change the status of your registration.

Registration Notification: After a registration application is approved, this notice will be displayed in the system, and an official notification email will be sent to the email address reserved during account creation.

Modification Notification: After a modification application is approved, this notice will be displayed in the system, and an official notification email will be sent to the email address reserved during account creation.

Import Suspension Notification: Receipt of this notice means the corresponding China registration has been suspended. During this period, no cancellation application may be submitted for the China registration, and relevant food products cannot be exported to China.

Import Resumption Notification: Receipt of this notice means the corresponding China registration has been restored to valid status. Relevant food products may resume export to China.

Revocation Notification: Receipt of this notice means the corresponding China registration becomes invalid immediately.

Cancellation Notification: Receipt of this notice means the corresponding China registration has been officially cancelled and invalidated.

Extension Notification: Receipt of this notice indicates that the renewal application for the corresponding China registration has been approved or GACC has implemented automatic renewal for the China registration. An official notification email will be sent to the email address reserved during account creation.

Click the “**Notification**” menu on the left to enter the notification page.

5.8 Reinspection

Based on the food safety risk level of imported foods, the GACC conducts follow-up reinspections to determine whether overseas manufacturers of imported foods continue to meet registration requirements.

Reinspections are initiated by the GACC and fall into two categories: In one category, the manufacturer must cooperate and submit the required materials. The manufacturer must complete the reinspection and submit the reinspection results and relevant materials within the specified timeframe. If the manufacturer fails to complete the process within the specified timeframe, the reinspection is deemed unsuccessful. In the other category, although a reinspection is conducted, the manufacturer is not required to submit any materials. The GACC completes the reinspection on its own, and the manufacturer does not need to take any action, nor is there a deadline for completion. Through this module, manufacturers can view the details of reinspection requests issued by the GACC. The processing status of each stage of the reinspection process and the manufacturer's current registration status can be viewed in real time through the system.

Operation Flow:

Step 1: Access the Reinspection module. Click “Reinspection” in the left-hand menu. The system will display the reinspection requirements issued by the GACC to the manufacturer, showing pending reinspection information by default.

Step 2: View the details of the reinspection request. Click the [View] button for the corresponding entry in the reinspection list. The system will display the reinspection details page, with the current processing status shown in the upper-right corner.

Step 3: Submit reinspection materials. This applies only to reinspections that require the manufacturer’s cooperation and submission of materials. When the processing status is “To be processed by enterprise”, the manufacturer may fill out a reinspection explanation for each nonconformity and upload supporting documents.

5.9 Rectification

If GACC determines that a registered overseas food manufacturer no longer meets the registration requirements, it shall order the manufacturer to carry out rectification within a specified timeframe and notify the competent authorities in the manufacturer's country (region) to oversee the rectification. During the rectification period, imports of food from the relevant manufacturer shall be suspended. After the manufacturer completes rectification, GACC will review the corrective measures. Where the requirements are satisfied, imports of food from the relevant manufacturer will be resumed.

Through this module, manufacturers can view the detailed content and specified deadlines of rectification requirements issued by the GACC. They must complete the rectification and submit a report on the rectification status along with relevant materials within the specified timeframe. Once the GACC issues a rectification requirement to a manufacturer, the system will simultaneously change the manufacturer's registration status to "Import Suspended" and display the full text of the rectification requirement and the specified deadline within the system.

Operation Flow:

Step 1: Go to the Rectification module. Click "**Rectification**" in the left-hand menu to access the rectification inquiry page and view the rectification requirements issued by the GACC.

Step 4: Submit the rectification materials. Once you have completed filling out the rectification materials and uploading the attachments, click the **[Submit]** button. The

system will then submit the materials provided by the manufacturer to the GACC for evaluation and review.

Step 5: Pending evaluation and review. The GACC will evaluate and review the rectification materials submitted by the manufacturer. If the rectifications are approved, the GACC will initiate the import resumption process, and the system will restore the manufacturer’s normal registration status, allowing the relevant food products to resume export to China. If the rectifications are not approved, the GACC may issue a decision on further action and initiate the process to revoke the manufacturer’s registration.

Application Status: Refers to the latest processing status of the corresponding application. For an explanation, see the Appendix: System Status Description.

List Registered: When a manufacturer selects “List-based Registration” as the registration application method, this field displays “Yes”; otherwise, it displays “-”.

Step 1: Search for an application. After selecting or entering search criteria in the search area, click the **[Inquire]** button. The system will display applications that meet the criteria in the list below.

column of the list to open the application details page. The application status is displayed in real time in the upper-right corner of the details page. Depending on the application's current status (See Appendix for status definitions), the available actions are as follows:

1. If the status is marked as “Enterprise temporary saved” or “To be corrected by enterprise”, and the handle step is set to “Enterprise”, the manufacturer may continue to edit, modify, and submit the application.
2. If the status is “Processing Failed,” and the handle step is set to “Enterprise”, the manufacturer may edit, modify, and resubmit the application; if the processing stage is set to “Competent Authority”, the competent authority may edit and modify the application, but the manufacturer is not permitted to make changes or submit it.
3. For applications with other statuses, the manufacturer is not permitted to edit, modify, or submit the application.
4. For applications with a status of “Enterprise temporary saved”, “Processing Failed”, or “To be corrected by enterprise”, the manufacturer may click the **[View]** button to access the details page and continue editing.

Step 3: View the evaluation and review comments from the GACC or the competent authority of the country (region) of origin. For applications where the GACC or the competent authority has completed its review, click **[View]** in the “Customs feedback” and “institutional feedback” columns, respectively, to view the detailed content of the corresponding review comments.

Reminder:

1. For application procedures handled by the competent authority or China Customs, manufacturers may not edit, modify, or submit the application.
2. If registration of this product category is restricted in your country (region), a

message stating, “This product category cannot be registered in your country (region).” will appear when you query the details of the relevant product application.

5.10.2 Obtained Registration in China

This function enables manufacturers to query their China registration records already been obtained.

Appendix: System Status Description

Status	Description
Enterprise temporary saved	The application is temporarily saved at the enterprise end, which needs to be submitted to the competent authority of the country/region)/GACC
Submitted to authorities	The application has been submitted to the competent authority and is awaiting review.
Submitted to the GACC	1. The competent authority has recommended the enterprise's application to GACC. 2. The enterprise has submitted the application to GACC.
Authorities temporarily saved	Application information is being processed by the competent authority of the country (region), which is temporarily kept at the competent authority and needs to be submitted to GACC.
Refused by authorities	The competent authority of the country (region) rejects the application of the enterprise, and the enterprise cannot modify the application. If the enterprise needs to apply to GACC, a new application shall be filled in.
Sending to the GACC	System processing. Applications recommended by the competent authorities or submitted by overseas manufacturers are being sent to GACC.
Processing failed	An error or anomaly occurred in the processing of the application, and the competent authority or enterprise in the country (region) can submit the application again without filling in a new application.
Submitted Successfully, in process	System processing. The application has been received by GACC and will be evaluated and reviewed.
Application accepted, Under review	The application has been accepted by GACC and will be reviewed.
Refused by the GACC	GACC has rejected the application.
To be corrected by authorities	If the submitted application does not comply with the requirements of GACC, the contents shall be modified or supplemented by the competent authority of the country (region), and the application shall be modified by the competent authority of the country (region) and submitted again. It does not need to fill in a new application.
To be corrected by enterprise	If the submitted application does not comply with the requirements of the competent authority of the country (region) or GACC and it needs to modify or supplement the filled contents, the enterprise shall modify the application and submit it again. It does not need to fill in a new application.
Unapproved	GACC rejects the application recommended by the competent authority or submitted by the enterprise.
Approved	If the overseas manufacturer of imported food meets the requirements, GACC shall approve the registration application and grant a Chinese registration number to the enterprise.
Revoked	The GACC has initiated the cancellation of the registration of a certain manufacturer that had already obtained registration in China.
Suspended	GACC suspends the export of food products by the registered enterprise to China until the registration requirements are met after rectifications.
Rectification	If a registered overseas manufacturer of imported food no longer conforms to the registration requirements, GACC shall request the manufacturer to rectify within a specified period and shall suspend imports from the manufacturer during this period. The manufacturer shall complete the rectification within the specified period and submit to GACC a written report and a written statement confirming it has conformed to the registration requirements.
